Package contents:

Description	Quantity
Geomtric Hood & Rocker Graphics	1
35" 360º Camera Spare Tire Carrier Kit	1
Swing Gate Bronco Emblem – Matte Black	1
Smoked Chrome Ford Oval	1
Havoc Fender Flares	4
Off-Road Suspension Kit	1
Black Lug Nuts	30
Bronco Wheels	5
ProCal 4 Tool	1

Installation Section:

- 1. Geometric Hood & Rocker Graphics
- 2. 35" Spare Tire Carrier
- 3. Swing Gate Bronco Emblem Matte Black
- 4. Smoked Chrome Ford Oval
- 5. <u>Havoc Fender Flares</u>
- 8. Suspension SORB Removal
- 9. Suspension Removal and Installation
 - a. Jacking and Lifting Points
 - b. <u>Front Assembly Removal</u>

Installation

1. To install, reverse the removal procedure.

Vehicles equipped with rear view camera only

- 2. Initialize the rear view camera. Refer to: Parking Aid Camera Initialization (413-13B Parking Aid, General Procedures).
 - 1. Using a scan tool, select the controlling module for the parking aid camera(s).
 - 1. Refer to the wiring diagram to identify the camera controlling module.
 - Refer to Wiring Diagrams Cell <u>145</u> for schematic and connector information.
 - 2. Select the controlling module on the diagnostic scan tool screen.
 - 2. Carry out the LIN new module initialization.
 - 3. Follow the on-screen instructions.
 - 4. Check the vehicle for the active guidelines option. Refer to description and operation in the appropriate vehicle section.
 - 5. If equipped with active guidelines, drive the vehicle on a flat, smooth road at 32 km/h (20 mph) or more, with hands placed loosely on the steering wheel and minimal steering correction for approximately 30 seconds.

Vehicles equipped with 360 degree cameras

3. Carry out the 360 degree camera alignment. Refer to: 360 Degree View Camera Alignment (413-13B Parking Aid, General Procedures).

NOTE: Damage to or misalignment of any of the cameras or the body panels they are mounted to, can affect the camera alignment.

- 1. Prior to beginning this procedure, perform the following:
 - 1. Verify the exterior rear view mirrors to make sure they are in a normal driving position.
 - 2. Verify suspension is in a normal driving mode, if equipped with adjustable suspension.
 - 3. Verify that all doors, deck lid, liftgate, and tailgate are closed.
 - 4. Using a scan tool, retrieve and if necessary, repair any parking aid camera DTC .
 - 5. Clean the camera lenses. Inspect all cameras (except center high-mounted stoplamp camera and

trailer camera, if equipped), the associated mounting hardware and body components for damage.

- 2. Environmental conditions that may affect the procedure:
 - 1. Perform procedure in daylight.
 - 2. Perform procedure when visibility is clear with high contrast scenes that are not disturbed by strong rainfall or snow.
 - 3. Recommend driving on normal asphalt or concrete surface.
- Avoid road surfaces that have a smooth and uniform appearance (e.g. snow blanketed roadway).
 Using a scan tool, carry out the 360 degree view camera alignment procedure.
 - 1. Refer to the wiring diagram to identify the camera controlling module.

Refer to Wiring Diagrams Cell <u>145</u> for schematic and connector information.

2. Select the controlling module on the diagnostic scan tool screen.

- 3. Select the alignment procedure.
- 4. Follow the on-screen instructions.

- 4. After the procedure is successful, verify the quality of the 360 degree view camera on the display.
 - 1. Drive to a parking lot and stop vehicle over straight parking designation lines.
 - 2. Activate the 360 degree view camera system.

3. Drive slowly over the parking designation lines while watching the corners of the 360 image for stitching quality. Lines should look continuous.

- 4. Verify functionality of the camera system.
 - 1. Engine on with emergency brake applied throughout the entire procedure.
 - 2. With the brake pedal applied throughout the entire procedure, put the vehicle into "Reverse".
 - 3. Verify SYNC screen displays a valid rear view camera image with static guidelines.
 - 4. Turn the steering wheel 360° to the left or right and verify SYNC screen shows the dynamic guidelines.
 - 5. Turn the steering wheel back to straight. Put the vehicle into "Park". Engine off.

Removal – Swing Gate Bronco Emblem

1. Use painters tape to create a reference template for installing the new emblem. Make sure the tape is flush with the top of the tail and right hand side of the Bronco emblem.

2. Use a heat gun or hair dryer to loosen the adhesive on the back side of the emblem.

Ford Factory Shop Manual purchase options www.motorcraftservice.com

Techline 1-800-367-3788

Page 14 of 96 IS M-BRONCO-W3,W4,W11,W12,W17,W18 071525

NO PART OF THIS DOCUMENT MAY BE REPRODUCED WITHOUT PRIOR AGREEMENT AND WRITTEN PERMISSION OF FORD PERFORMANCE PARTS © Ford Motor Company 2020

3. While wearing gloves, use fishing line to cut through the back of the emblem and remove.

4. Remove the remaining foam and clean surface with alcohol wipes.

Ford Factory Shop Manual purchase options www.motorcraftservice.com

Techline 1-800-367-3788

Removal – Fender Flares

REMOVABLE FENDERS

REMOVABLE FENDER PRECAUTIONS

WARNING: Do not drive your vehicle on public roads with fenders removed as you will lose the protection they provide in a crash. Failure to follow this instruction could result in personal injury or death.

REMOVING THE FENDER FLARES

1. Unlock the five quarter turn clips by turning the clips counterclockwise.

Ford Factory Shop Manual purchase options www.motorcraftservice.com

Techline 1-800-367-3788

Page 18 of 96 IS M-BRONCO-W3,W4,W11,W12,W17,W18 071525

Installation – Havoc Fender Flares

STEP 1 - PRIOR TO INSTALLATION

- A) Bushwacker[®] only approves installing the flares according to these written instructions with the hardware provided. WARNING: Failure to install according to these instructions will invalidate the warranty. This includes, but is not limited to using alternative installation methods, hardware, or materials. DO NOT USE: Loctite, SuperGlue, or similar products on the hardware or the flares.
- B) Fit: Verify the fit of the flares to vehicle. (Some filing, sanding, or cutting may be necessary to ensure proper fit).
- C) Painting: (Optional) if paint is desired it must be done prior to installing flares on vehicle. Clean outer surface with a good grade degreaser. DO NOT USE LACQUER THINNER OR ENAMEL REDUCER AS A DEGREASER. Wipe outer surface thoroughly with a tack rag prior to paint. Application of plastic adhesion promoter for ABS plastic as per your paint system manufacturer's recommendations is required. Paint flares using a high quality enamel, or polyurethane automotive paint. If painting edge trim (not recommended), use a flex additive.
- D) Performance: Using larger Tires may increase the area required to turn the vehicle. Some Tire/Rim combinations may require lowering bump stops and or installing steering stops to prevent tire from contacting flare.
- E) Exhaust System: Modifications may be necessary to maintain a minimum 4" clearance between flares and exhaust pipes. (Exhaust gases should not vent directly onto flares)
- F) Metal Protection: All exposed fasteners and bare metal should be treated with rust resistant paint BEFORE installing flares. Spray inner fender wells with undercoating AFTER flare attachments have been completed.
- **G)Decals:** Flares may interfere with existing decals on vehicle. If you wish, remove decals prior to installation of flares.
- H) Care & Cleaning: Bushwacker fender flares are built to last; any detergent you use to wash your vehicle is sufficient to clean the flare. Do not use any harsh abrasive detergents.

Set Part #VR2DZ-16268-B

Rev-1 11/14/2023

For complete fitment info visit : www.bushwacker.com

TOOLS FOR EASY INSTALLATION:

- Utility Knife
- #2 Phillips Screwdriver
- Wrench Set
- Socket Wrench Set
- Grease Pencil
- Masking Tape

PLEASE READ: Dirt and debris can become lodged between the fender flares and the vehicle's fenders, causing scratching and paint wear from vibration. Lund International is not responsible for any damage, and the installation of our fender flares is done with the buyer's understanding that this scratching and paint wear may occur.

3 YEAR LIMITED WARRANTY AGAINST ANY MANUFACTURING DEFECTS

• To claim a warranty, you must provide Proof of Purchase.

The material that your product is made from can be recycled. Please also consider recycling the packaging that your product came in.

STEP 2 - EDGE TRIM INSTALLATION

A. Peel two to three inches of red vinyl backing away from Edge Trim (GP1-0025) tape. Applying the adhesive side of the edge trim to the inner side of the flare, affix the edge trim to the top edge of the flare (the portion that comes in contact with the vehicle).

B. Press edge trim into place along the top edge of the flare in one-foot increments, pulling red vinyl backing free as you continue to work your way around the top edge of the flare.

Front Flare Installation Procedures (Passenger's Side):

Twist (5) quarter turn fasteners. Firmly pull on flare to remove.

Ford Factory Shop Manual purchase options www.motorcraftservice.com

Techline 1-800-367-3788

Rear Flare Installation Procedures (Passenger's Side):

Twist (5) quarter turn fasteners. Firmly pull on flare to remove.

Remove (3) factory body bolts and retain.

Verify presence of U-clip on inner brackets.

Install inner bracket using (3) factory body bolts, and (1) RV1-P006 nylon retainer.

NOTE: Ensure that edge trim is seated correctly before proceeding. Press flares firmly onto the vehicle and install and fully tighten (5) SW1-0058 screws.

Use (1) SW1-0058 screw on end of flare.

า งาน i ละเงา y งางห พลานลเ หนาะกลระ งหนงกร <u>พพพ.กางเงาะกลแระเ ทางะ..งกก</u>

WARNING: Before raising the vehicle on a hoist, make sure the hoist capacity is adequate for the vehicle weight, including any vehicle cargo or modifications. Always position the hoist lift arms as shown in section 100-02 of this manual. Do not use the engine to power the drive wheels unless all drive wheels are elevated off the ground. Incorrect hoist arm positioning or drive wheels in contact with the ground can cause unintended vehicle movement. Failure to follow these instructions may result in serious personal injury or death.

WARNING: Position the hoist lift arms as shown in the illustration. Incorrect positioning could result in vehicle slipping or falling from the hoist. Failure to follow this instruction may result in serious personal injury.

WARNING: Never get underneath a vehicle that is supported only by a jack. The jack could unintentionally lower. Always support vehicle with floor stands. Failure to follow these instructions may result in serious personal injury.

WARNING: Identify the correct jacking points by locating the triangle stamped into the unibody sheet metal or vehicle frame or molded into the body rocker moulding. Raising a vehicle in any other location may result in vehicle shifting or falling. Failure to follow this instruction may result in serious personal injury.

WARNING: Only raise the vehicle when positioned on a hard, level surface. Attempting to raise the vehicle on an uneven or soft surface may result in vehicle slipping or falling from the jack or jackstand. Failure to follow this instruction may result in serious personal injury.

WARNING: When jacking or lifting the vehicle, block all wheels remaining on the ground. Set the parking brake if the rear wheels will remain on the ground. These actions help prevent unintended vehicle movement. Failure to follow these instructions may result in serious personal injury.

NOTICE: The jack provided with the vehicle is intended to be used in an emergency for changing a deflated tire. To avoid damage to the vehicle, never use the jack to hoist the vehicle for any other purpose.

NOTICE: Do not attempt to jacking on the front bumper or the rear bumper on any vehicle. Damage to bumper covers will occur.

NOTICE: Do not attempt to jacking on the front control arm or rear control arm on any vehicle. Damage to control arms may occur.

NOTICE: Do not use the differential housing as a lift point. Leaks or damage to the rear axle cover and adjoining differential housing surface may occur if a floor jack or any lifting device is allowed to contact the cover at any point where the cover joins the housing.

NOTICE: Place blocks underneath the lifting points if a two-column hoist is used.

NOTICE: Damage to the suspension, exhaust or steering linkage components may occur if care is not exercised when positioning the hoist adapters prior to lifting the vehicle.

NOTICE: To prevent possible damage to the underbody, do not drive the vehicle onto the drive-on lift without first checking for possible interference.

NOTICE: When raising a vehicle on a two-column hoist, use care when positioning the vehicle so that the hoisting forks do not interfere with suspension components, mounting brackets or stabilizer mounting brackets, if equipped. In addition, use care in hoist positioning to avoid possible damage to the axle or rear cover.

Wheel and Tire

Removal

NOTICE: Do not use heat to loosen a seized wheel nut.

NOTICE: Do not use power tools on locking wheel nuts.

- 1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to: Jacking and Lifting
- 2. NOTICE: Do not use heat to loosen a seized wheel nut or damage to the wheel and wheel bearing can occur.

NOTICE: If equipped with full wheel cover with exposed wheel nuts, the wheel nuts must be removed prior to removing the wheel cover or damage to the wheel cover will occur.

NOTE: Use metric hexagonal socket.

Remove the wheel nuts.

Techline 1-800-367-3788

Page 76 of 96 IS M-BRONCO-W3,W4,W11,W12,W17,W18 071525

NO PART OF THIS DOCUMENT MAY BE REPRODUCED WITHOUT PRIOR AGREEMENT AND WRITTEN PERMISSION OF FORD PERFORMANCE PARTS © Ford Motor Company 2020

WARNING: When a wheel is installed, always remove any corrosion, dirt or foreign material present on the mounting surface of the wheel and the mounting surface of the wheel hub, brake drum or brake disc. Make sure that any fasteners that attach the rotor to the hub are secured so they do not interfere with the mounting surfaces of the wheel. Failure to follow these instructions when installing wheels may result in the wheel nuts loosening and the wheel coming off while the vehicle is in motion, which could result in loss of control, leading to serious injury or death to vehicle occupant(s).

NOTICE: Make sure to apply a thin coat of anti-seize lubrication only to the interface between the wheel pilot bore and the hub pilot. Do not allow the anti-seize to make contact with the wheel-to-brake disc/drum mounting surface, wheel studs, wheel nuts, brake pads or brake disc friction surfaces or damage to components may occur.

Clean the mounting surfaces. Apply anti-seize lubrication. Anti-Seize Lubricant (-;XL-2)

NO PART OF THIS DOCUMENT MAY BE REPRODUCED WITHOUT PRIOR AGREEMENT AND WRITTEN PERMISSION OF FORD PERFORMANCE PARTS © Ford Motor Company 2020

Installation

1. **NOTE:** Only tighten the nuts finger tight at this stage.

Install the wheel and tire and install the wheel nuts.

E351489

2. A WARNING: Retighten wheel nuts within 160 km (100 mi) after a wheel is reinstalled. Wheels can loosen after initial tightening. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

NOTICE: Failure to tighten the wheel nuts in a star/cross pattern can result in high brake disc runout, which accelerates the development of brake roughness, shudder and vibration.

NOTE: The wheel nut torque specification is for clean, dry wheel stud and wheel nut threads.

NOTE: Use metric hexagonal socket.

NOTE: Final tightening to be performed with vehicle resting on tires.

Headlight Aim Adjustment

All headlamp types

NOTE: Refer to the Owner's Literature for the headlamp adjustment screw location.

NOTE: Consult your state vehicle inspection manual for recommended tolerance ranges for visual aiming.

NOTE: Horizontal aim is not adjustable.

- Identify the headlamp type. Vehicles are equipped with Visually Optically Aligned Left (VOL) or Visually Optically Aligned Right (VOR) headlamps. Molded in small letters on the headlamp lens is one of the following: VOL and SAE or VOR and SAE.
- 3. NOTE: Before starting headlamp adjustment, entry conditions must be met.
 - Vehicle must be on level ground.
 - Tires must be correctly inflated.
 - Vehicle must be normally loaded.
 - Headlamps must be clean.
 - Headlamps must operate correctly.
 - Air suspension switch must be on (if equipped).
- 4. NOTE: The vertical wall or screen must be a minimum of 2.4 m (8ft) wide.

Park the vehicle on a level surface approximately 7.6 m (25 ft) from the vertical wall or screen directly in front of it.

Techline 1-800-367-3788

Page 80 of 96 IS M-BRONCO-W3,W4,W11,W12,W17,W18 071525

NOTE: The bulb center of the low beam bulb is sometimes marked on the lens (circle, crosshair or other mark) or is the center of the low beam reflector, bulb shield or the low beam projector inner lens.

Measure the center of the headlamp height to ground and record the measurement.

- 6. NOTE: Use a 2.4 m (8 ft) section of masking tape for the horizontal reference line.
 - For vehicles with headlamp bulb center heights below 95 cm (37.5 inches), place the horizontal reference line equal to the headlamp bulb center height.
 - For vehicles with headlamp bulb center heights between 95 cm 105 cm (37.5 41.5 inches), place the horizontal reference line at the headlamp bulb center height minus 1.3 cm (0.5 inch).
 - For vehicles with headlamp bulb center heights above 105 cm (41.5 inches), place the horizontal reference line at the headlamp bulb center height minus 2.5 cm (1.0 inch).
- 7. NOTE: Carry out this procedure in a dark environment to effectively see the headlamp beam pattern.

Turn the low beam headlamps on to illuminate the wall or screen and open the hood.

8. **NOTE:** The cut off of the beam pattern is the horizontal line of the beam pattern where there is MAXIMUM change between light and dark.

On the wall or screen, locate the cut off of the beam pattern.

VOR-type headlamps

NOTE: Procedure applies to both left and right headlamps with VOR molded on lens.

9. **NOTE:** The appearance of the VOR beam pattern may vary between vehicles.

There is a distinct cutoff in the right portion of the beam pattern.

- 1 Horizontal reference line
- 2 Cut off
- 3 High intensity zone

10. NOTE: Align one headlamp while covering the other headlamp.

Align the headlamps to the horizontal reference line. Adjust the headlamp as necessary using the headlamp adjusting screw.

11. Repeat the previous step for the remaining headlamp.

VOL-type headlamps

NOTE: Procedure applies to both left and right headlamps with VOL molded on lens.

12. NOTE: The appearance of the VOL beam pattern may vary between vehicles.

For VOL-type headlamps, there is a distinct cutoff in the left portion of the beam pattern. The edge of this cutoff should be positioned 5 CM (2 in) below the horizontal reference line.

Cruise Control Radar Alignment

Adjustment

Vertical Alignment

NOTE: Make sure that the tire pressures are to specification and that the vehicle is unladen.

NOTE: In order to align the CCM (cruise control module), the front bumper must be removed to access the sensor and the vehicle must be in a wheel alignment bay station so that the vehicle is level.

NOTE: Damage to the CCM (cruise control module) bracket may affect correct alignment. When aligning the CCM (cruise control module), inspect the CCM (cruise control module) bracket for damage and repair as necessary before carrying out the alignment procedure.

NOTE: The CCM (cruise control module) bracket is part of the active grille shutter. If damage is found to the CCM (cruise control module) bracket during inspection, a new active grille shutter must be installed.

- 1. Remove the front bumper plastic. Refer to: Front Bumper - Plastic Removal and Installation.
- 2. **NOTE:** The front bumper needs to be removed on most vehicles to remove the CCM (cruise control module) cover.

Release the CCM cover top clips and remove the cover.

Ford Factory Shop Manual purchase options www.motorcraftservice.com

Techline 1-800-367-3788

5. NOTE: Measurement must be taken from the non-raised side of the CCM (cruise control module).

Place a combination square level on the face of the CCM and check the alignment.

Ford Factory Shop Manual purchase options <u>www.motorcraftservice.com</u>

Techline 1-800-367-3788

Page 86 of 96 IS M-BRONCO-W3,W4,W11,W12,W17,W18 071525

6. NOTE: Measurement must be taken from the non-raised side of the CCM (cruise control module).

Keeping the combination square level on the face of the CCM , adjust the pitch by turning the adjustment screw until the CCM is vertical and level.

7. Install the front bumper. Refer to: Front Bumper - Modular (501-19 Bumpers, Removal and Installation).

Horizontal Alignment

NOTE: The horizontal alignment for the CCM (cruise control module) is a software calibration check that is performed by the scan tool to insure the CCM (cruise control module) radar is pointed straight. No manual adjustment is needed for this procedure. The scan tool calibrates the CCM (cruise control module) through the CCM (cruise control module) procedure in programmable parameters. The Alignment Offset specification is +/- 3.0 degrees of offset.

8. NOTICE: The vehicle's engine must be running during the horizontal alignment procedure. Failure to leave the engine running throughout the entire procedure results in the cancellation of the alignment procedure and the system remains non-functional.

Start the engine.

9. Follow the scan tool on-screen instructions to carry-out the CCM calibration procedure.

ProCal

- 1. Connect Pro Cal 4 tool to the vehicle using the included cable.
- 2. Power vehicle on by pressing the start button, to full accessory mode (engine off).

It is recommended that you have the vehicle on a battery charger during these following operations. Loss of power during programming/configuration can cause corruption to the modules.

- 3. You will see this screen pop up once the Pro Cal 4 tool has finished loading.
- 4. Select Diagnostics & Tools
- 5. Select Tire/Gear Adjust
- 6. Notice this will VIN lock this Pro Cal 4 device to this vehicle.
- 7. On this screen there is 2 parameters that can be adjusted. For this package, only update the top parameter to Tire (Rev/mile) to "<u>606</u>". This is the parameter to update to the new tire size recommended with this package for the 315/75R17.
- 8. Click Continue and then follow the on screen prompts as listed below.
- 9. It will now prompt for the vehicle's ignition to be turned off, then turned back on to key on to accessory mode (engine off).
- 10. Follow the prompts on screen, and wait the displayed amount of time that the Pro-Cal 4 needs to configure the modules.
- 11. Turn the ignition off once again, then turn the vehicle back on to accessory mode (engine off).
- 12. Go to Diagnostics & Tools
- 13. Select Service Functions
- 14. Select CDP Learn "CDP" = Configurable Data Parameters
- 15. Follow the prompts on screen.
- 16. Tire size learning is now complete.

Service Procedures

360 Degree View Camera Alignment (If Equipped)

NOTE: Damage to or misalignment of any of the cameras or the body panels they are mounted to, can affect the camera alignment.

- 1. Prior to beginning this procedure, perform the following:
 - 1. Verify the exterior rear view mirrors to make sure they are in a normal driving position.
 - 2. Verify suspension is in a normal driving mode, if equipped with adjustable suspension.
 - 3. Verify that all doors, deck lid, liftgate, and tailgate are closed.
 - 4. Using a scan tool, retrieve and if necessary, repair any parking aid camera DTC .
 - 5. Clean the camera lenses. Inspect all cameras (except center high-mounted stoplamp camera and trailer camera, if equipped), the associated mounting hardware and body components for damage.
- 2. Environmental conditions that may affect the procedure:
 - 1. Perform procedure in daylight.
 - 2. Perform procedure when visibility is clear with high contrast scenes that are not disturbed by strong rainfall or snow.
 - 3. Recommend driving on normal asphalt or concrete surface.
 - 4. Avoid road surfaces that have a smooth and uniform appearance (e.g. snow blanketed roadway).
- 3. Using a scan tool, carry out the 360 degree view camera alignment procedure.
 - Refer to the wiring diagram to identify the camera controlling module. Refer to Wiring Diagrams Cell <u>145</u> for schematic and connector information.
 - 2. Select the controlling module on the diagnostic scan tool screen.
 - 3. Select the alignment procedure.
 - 4. Follow the on-screen instructions.

Ford Factory Shop Manual purchase options www.motorcraftservice.com

Techline 1-800-367-3788

Page 95 of 96 IS M-BRONCO-W3,W4,W11,W12,W17,W18 071525

NO PART OF THIS DOCUMENT MAY BE REPRODUCED WITHOUT PRIOR AGREEMENT AND WRITTEN PERMISSION OF FORD PERFORMANCE PARTS © Ford Motor Company 2020

- 4. After the procedure is successful, verify the quality of the 360 degree view camera on the display.
 - 1. Drive to a parking lot and stop vehicle over straight parking designation lines.
 - 2. Activate the 360 degree view camera system.
 - 3. Drive slowly over the parking designation lines while watching the corners of the 360 image for stitching quality. Lines should look continuous.

Image Processing Module A (IPMA) Service Alignment

1. Using a diagnostic scan tool, complete the PMI process for the IPMA following the on-screen instructions.

2. Carry out the camera alignment using a scan tool.
